**New Toggle Safety Cover Provides Protection
Against Accidental Actuation**

Southampton, PA. –CW Industries, a long recognized manufacturer of switches, connectors and custom components for the OEM, has developed a new Toggle Safety Cover featuring a rugged spring-loaded design that provides protection against accidental actuation.

The CW GT-4X Toggle Safety Covers are available in white, black and red and designed to mate with CW Industries GTS Series toggle switches. The mounting base faceplate is glossy black steel and the safety cover is an ABS blended plastic resin. The mounting hole is .481" and accepts all standard toggles with 15/32" mounting stems.

Used in a wide range of commercial applications including cockpits, power plants, command centers, agricultural equipment, racing and general industrial automation, the CW Safety Cover prevents any inadvertent or accidental lever actuation. When the cover is raised, the toggle can be operated freely. When the cover is fully depressed, the toggle is locked in a stable position. The Toggle cover is attached to the switch by means of a threaded nut.

Serving customers since 1904, CW Industries is a World Class Manufacturer serving many of the leading industrial, consumer and defense electronics manufacturers with complex electromechanical slide, rocker and pushbutton switches; insulation displacement and MIL SPEC connectors; and a variety of custom switches, custom connectors and assemblies that require a high level of precision, performance and reliability. CW Industries is ISO 9001 Certified and our in house test facility is qualified to UL, CSA and DOD standards.
